The **Physics Brain-Teasers** website invites students to engage in physics! Through specifically formulated and brain-teasing problems, students are motivated to deal with physics laws.

Our free online accessible learning environment enables different individual ways of learning and promotes the confidence necessary to be successful in physics. This program is suitable to supplement physics classes and may, for example, be used in free work phases, group work or homework.

This learning environment offers teachers facilities for internal differentiation. It provides opportunities for individualized, bilingual learning and, also, encourages discussions about physics questions.
